

For Creating Professional Presentation

A good presentation can make or break your sales pitch of design concepts. **Design Presentation** offers a range of tools and simple drag and drop design functionality to create professional presentations/design story for the sales dept. and customers. No more do you have to manually cut paper swatches or paste the designs on paper, **Design Presentation** allows you doing this digitally and seamlessly change the order or placement for the most ideal layout. It goes further in texture mapping the design onto style sketches and placing them alongside giving a more comprehensive sales concept.

This CAD system coupled with 3D module increases the prowess of your presentation multi-fold by generating a realistic end use of the fabric designed.

It helps you layout the design along with its colorways and color palette onto your company design display card.

A range of fonts and special effect tools like shadow etc. adds grace to your presentations. The capability to manage the order of placement for overlapping images helps highlight the best design.

Creating Stories

User is allowed to define size of his canvas in A3, A4, etc. along with your regular templates containing your company name and logo.

Desired design can be simply dragged onto the canvas and placed at desired location. Facilities to resize, rotate etc. are provided to help create a story a more pleasurable experience.

Facility to input textures at various transparency levels augments the effectiveness of the story.

Allows import of design objects in various formats alongwith its matchings. The object can be plinked, titled etc.

Further the color palette can be placed alongwith the design. The placement and style of the palette is definable.

Design Atlas

A versatile design management module allows you to classify your designs in various themes and sub classify the same for easy retrieval and utilisation. Aptly located and functional user interface allows easy access to the desired design, enabling display of thumbnails for comparison on designs.

It facilitates import of files in standard formats such as BMP, JPEG, TIF etc. The **Textronics** formats are also included.

The drag and drop operation conveniently places the design on the canvas at the desired location.

Creating Realistic and 3D Presentations

Apart from creating Presentations 3 Dimensional mapping aids you in creating a visually appealing point of purchase displays.

Undoubtedly an ongoing campaign can be further reinforced by using the current material and introducing new design range concurrently.

This module uses the 3D engine and maps the selected design onto the model in final and realistic form.

This accuracy is achieved by the well researched algorithm created by the **Textronics** team.

Design Presentation **P**

Texture Mapping

The bi-dimensional sketch can be recalled, resized and placed as desired.

The same image can be duly mapped with the desired design by the simple drag and drop process.

This module also allows you to define the repeat style and scale as required.

The mapping properties can be set to the desired angles thus entailing a smooth and logical flow of the design.

The presentation can be further refined by placing the original sketch along with the mapped image. Also the design mapped can be used as background textures or swatches along with the matchings and color palettes.

The textual tiles and detailing alongwith makes the presentation a winner.

Applications

- In-house presentations
- PoP creations
- Sales presentations

In other words put your ideas in perspective.

Textronics

is devoted to continuous development of CAD technology for the textile industry.

A competent technical support team and a development team ensures that your needs are catered to well in time and to your satisfaction.
